Furthermore, you can select the video quality and size, as well as audio quality and volume, and optionally add a letterbox in order to keep the original aspect. Furthermore, you can specify the action to take after conversion finishes (e.g. open output folder, shut down the computer), as well as select the interface language and font size. In the "Settings" menu, you can select the decoder engine, process priority class and CPU core number in converting, as well as deinterlace the source video. Also, you can configure additional audio and video options, such as codecs, frame rate, aspect rate and sample frequency rate. The program uses a low-to-moderate amount of system resources, includes a step-by-step tutorial with snapshots and quickly finishes a task while preserving a good image and sound quality.
