
Universal Backup Crack+ X64

• Supports the backup of any MySQL databases with file paths and the backup of any directories, with file paths or contents, in addition to traditional MySQL backups. • Allows you to select the size of the local partition (the folder where you keep the file backups). • Supports any folder structure and meta-data relationships, including symbolic links. • Includes a search engine as standard that helps you find everything you back up (so, no more headaches and time-consuming searches). • Includes a plug-in system that provides you with a large selection of plug-ins in different databases to help you reach your goals quicker. • Includes in-depth reporting tools that show you all the steps of a backup process, and a detailed report of changes to the local partition (backup volume). • Includes file locking to prevent access and unauthorized changes to your files and databases when backing up. • Provides you with a minimum of fuss. All you need to do is select the database, add the files/folders and a time of execution, and the backup will be created. Universal backup Features: • Supports Full MySQL backups, Incremental MySQL backups and Partial MySQL backups. • Supports the backup of databases on Linux, Windows and Mac OSX. • Supports the backup of any MySQL databases with file paths and the backup of any directories, with file paths or contents, in addition to traditional MySQL backups. • Supports any folder structure and meta-data relationships, including symbolic links. • Includes a search engine as standard that helps you find everything you back up (so, no more headaches and time-consuming searches). • Includes a plug-in system that provides you with a large selection of plug-ins in different databases to help you reach your goals quicker. • Includes in-depth reporting tools that show you all the steps of a backup process, and a detailed report of changes to the local partition (backup volume). • Includes file locking to prevent access and unauthorized changes to your files and databases when backing up. • Provides you with a minimum of fuss. All you need to do is select the database, add the files/folders and a time of execution, and the backup will be created. Universal backup License: This application is free to use and install. It is not required to purchase any license for the use of the plug-ins and in-depth reporting tools. Universal backup Install: You only need to select the database you wish to

What's New in the?

Universal backup is a MySQL backup tool that does not require you to install anything and saves your data in an optimal way. Universal backup can backup a MySQL database in the following manners: - It can back up a single MySQL database in 3 different ways and saves it in 3 different spaces that can be viewed by any MySQL database client on the client server; - It can back up multiple MySQL databases in the same project with all databases in different folders with a folder association (or structure), which is equivalent to all databases in a single folder; - It can back up multiple databases in a different project with each database in a different folder with a folder association (or structure), which is equivalent to all databases in different folders. Universal backup backups the following MySQL types of databases: - Informix - MySQL - MariaDB Universal backup can backup any MySQL database in the following formats: - Stored procedures - MySQL InnoDB database templates - Macro definitions - With its preferences, you can backup the following fields: - Information about the backups - Folders associations - Number of backups - Use dates - Also, Universal backup can backup all MySQL database structures (layers). Universal backup can backup in the following ways: -
